THE **Gregory** AMPLIFIER CORP.
OPERATING INSTRUCTIONS

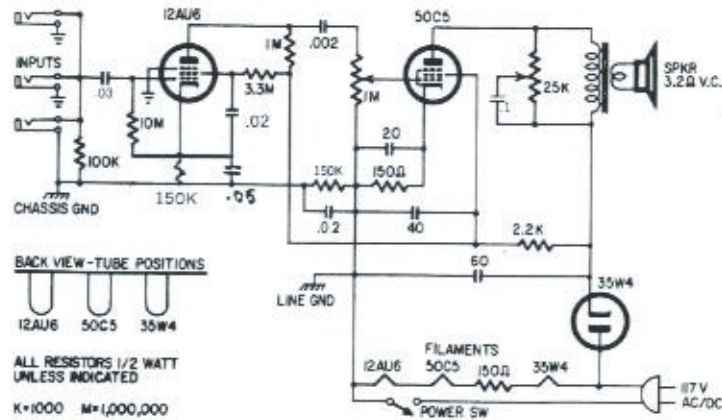

MARK TWO

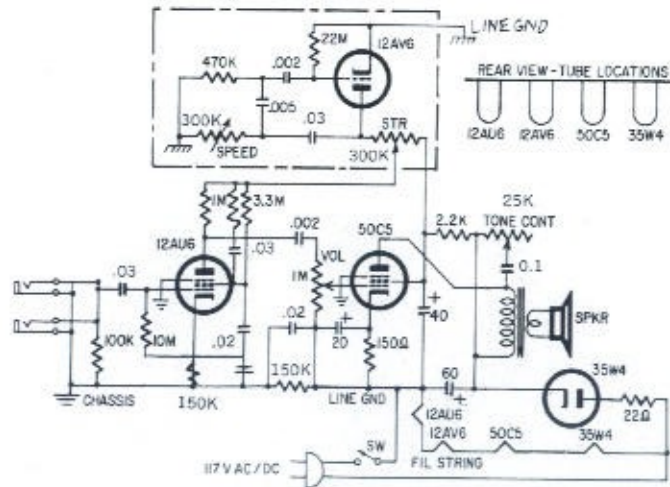

MARK SIX

3650 Dyre Avenue Bronx, N.Y. 10466

SCHEMATICS

MARK TWO

MARK SIX

Each Gregory Amplifier has been carefully tested and packed to assure proper performance at destination. With proper care it should provide many years of reliable service.

- OPERATING INSTRUCTIONS -

Mark Two

3 tube Amplifier - Tubes: 12AU6, 50C5, 35W4

- 1- Plug line cord into wall outlet (110-125 volt, AC-DC)
- 2- Turn volume control to "off" position (extreme counter clockwise position) and switch Amplifier on. Allow one minute to warm up.
- 3- Insert instrument plug into any of the instrument input jacks.
- 4- If hum is heard when volume is turned up, reverse line cord plug in wall outlet.
- 5- For best operation turn instrument to maximum. Adjust amplifier for loudest usable or needed volume. Further adjustment should be made with instrument controls.
- 6- Tone control affects all inputs uniformly. You get natural tone when control is turned to extreme clockwise position. When knob is turned counter clockwise, the treble is slowly de-emphasized.

Mark Six

4 tube Amplifier - Tubes: 12AU6, 12AV6, 50C5, 35W4

1-6 Inclusive- Same as Mark Two

NOTE: Additional steps for Amplifiers with tremolo

- 7- Adjust tremolo strength control for desired tremolo depth. Clockwise rotation increases affect. Tremolo jack is for foot switch to instantly turn on or off previously adjusted tremolo.
- 8- Speed control adjusts modulation to desired rate.

AMPLIFIERS FROM \$33.00 - \$229.95
